“The New Ion Pro Wave BlueRay System works great, feels so good after using it!”

TrueRife has developed what may prove to be the first real breakthrough in energy resonant therapy this century.

Water molecules are composed of two hydrogen atoms and one oxygen atom. When the molecule loses a hydrogen atom, the remaining OH molecule takes on a negative charge. As you walk along the beach, your body absorbs millions of these negatively charged ions, which alkalize the blood and tissue. Because of poor diet and high stress, we tend to accumulate and store excessive quantities of waste products, such as diacetic, lactic, pyruvic, uric, carbonic, acetic, butyric, and hepatic acids.

The Ion Pro Wave BlueRay Energy System creates precisely the same environment as a walk along the beach, only more powerfully because your feet are in direct contact with the ions being manufactured in the water. Place your feet in the water, turn on the unit and within seconds, millions of ions enter your body and begin to neutralize these tissue acid wastes. The particles, fat, and mucous residues found in the water after bathing reflect the wastes that have left the body during the session. Your body may feel lighter and more energized after the first session.

Ion Pro Wave: Generating Ions

An ion is a charged atom that has gained or lost an electron, which creates a magnetic field capable of attaching to and neutralizing oppositely charged particles. These neutralized particles are extracted from the body through the process called osmosis. Osmosis is a scientific term that is used to describe the movement of particles through a membrane from an area of lower concentration to an area of higher concentration. In this case, the higher concentration refers to the ion field that is set up by placing the unit into the water while running the system. Along with this ionization, specific frequencies are introduced to stimulate the lymph nodes and other bodily functions for detox.

The Ion Pro Wave system is placed into the water alongside the hands, feet, or body while the power supply delivers a low level DC current to the Ion Pro Wave plates. This causes the metals within the System in combination with water and salt to generate charged ions by separating oxygen and hydrogen in the water. These hydrogen bubbles are clearly observable during ionization.

Much research has been done about the importance of polarizing the cells for advanced healing. The photos below were taken by researchers after a 35 minute exposure to the ionized field produced by the hydrotherapy array:

Before

After

Pictured above are two photos of live blood cell samples taken before and after ionized hydrotherapy sessions. The photo to the left shows the subject's live blood cells before the foot bath. Note how the cells are clumped together. The picture to the right shows the same blood just 35 minutes later. Cellular separation is clearly evident.

Cells of opposite charges will clump together. Once the cells are polarized or carry the same positive or negative charge they will separate, increasing energy and proper function.

Immediately after a session it is typical to feel relaxed and have heightened mental clarity. However, users report that it is the cumulative effect of the sessions which are the most dramatic, providing a greater long-term benefit. Because the Ion Pro Wave increases the cell membrane energy levels, immune function may be substantially enhanced.

Ion Pro Wave / BlueRay output is different than other ionic foot baths because of its ability to deliver frequency programs for targeting specific conditions for research while still generating a ionized field similar to other foot bath manufacturers.

The new module activity is obvious from the moment the program is initiated, as a Blue Ray of light is clearly visible emitting from the module itself.

Benefits of Blue Light

1. Blue Light has been demonstrated to be anti-bacterial. For example blue light destroys P.acnes. Two common strains of methicillin-resistant *Staphylococcus aureus*, commonly known as MRSA, were virtually

eradicated in the laboratory by exposing them to the wavelength of blue light, in a process called photo-irradiation.

2. Some studies suggest that those exposed to blue light experience an increase in melatonin production, increased productivity and a reduction in pain.
3. Pulsations during some program sets induce brain entrainment at 1-4 cycles per second resulting in reduction of anxiety and stimulating relaxation.
4. When BlueRay lights there is no doubt there is power to the internal module!

The Blue Light generated from the Ion Pro Wave is doing more than simply outputting blue light emissions, it is frequency based output as can be seen during the programs that are pulsed.

Experiences

One client received 3 'hits' in three different areas during experimentation. These hits were duplicated when the frequencies were repeated and begin to subside after about one minute of exposure. There is a tremendous reaction using this system.

∞

A client reported that allergies were in 100% remission for the first 90 days following the Ion Pro Wave allergy frequencies, despite being under stress and sleep deprived.

∞

I have a client that comes to my clinic each week for a massage. She has been bothered with low back & hip pain for 20 years. She had an operation 15 years ago on her back & has 2 screws in her lower back. Her doctor said that she has some arthritis in the low back area. She explained to me that she has tried everything to relieve the pain with little success.

After 3 sessions, over a 7 day period, she is pain free in the lower part of her back. After 2 months of sessions, she describes a hollow feeling in the low back area, but no pain. She still has trouble with her hips when she over does but massage seems to help that.

Last Saturday while visiting a friend in the hospital, my wife accidentally pushed the baby stroller into the back of my heel. I didn't think much about it at the time and in fact worked the next two days without any ill effects. By day 3 my Achilles was flared up with pain and I was developing a definite limp in my walk. I ran the Ion Pro Wave Pain program along with SV40 on day 3. The next day (4) the pain was elevating to the point I could hardly sleep that night. By morning day 5 or 36 hrs after the treatment, I woke up in the morning in so much pain that I figured I might have irreparable damage. The Achilles was in constant pain, swollen and sensitive to the touch. In spite of this I limped (crawled) to work that morning.

I received a call from my partner and told him about my injury, but that I suspected I had promoted an accelerated healing phase that was resulting in excruciating pain.

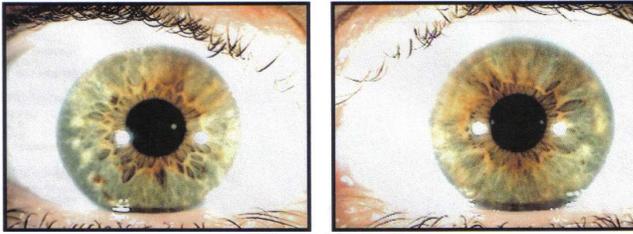

By the evening of Day 5, within hours all the pain was gone including my limp! I went to work the next day as though I had never been injured.

It may be possible to reduce pain and other symptoms caused by a lifetime of toxic buildup in the body (assuming the symptoms are caused by toxic buildup). The long-term effectiveness of the Ion Pro Wave detoxification process depends on other factors as well, such as diet, PH levels, as well as an individual's environment.

No medical claims are made or implied for TrueRife devices or frequency sets! They are not intended to diagnosis, cure, prevent, treat or mitigate any medical condition or disease. Please consult a qualified physician for any medical conditions!

First visit to Iridologist
Client diagnosed with a
yeast infection.
Eyes favor brown.

Second visit to Iridologist.

Third visit to Iridologist,
just before starting Rife
sessions.

This third set of pictures
represent 6 months of detox
work by the Iridologist!

Fourth session with
Iridologist after just two Ion
Pro Wave detox and one
Candida session.

Note how brownish tones
have dissipated. Eyes blue!

Pictures of a 44-year-old female taken by an iridologist over a 6-month period. Two days after her detox sessions on the Ion Pro Wave she went in to her iridologist to get another reading. He took two sets of pictures because he thought his camera was broke. The pictures are cloudy as she was still detoxing a lot of Candida, but eyes blue as can be!

What is the significance of color?

The Baseline of the Ion Pro Wave system is carmel colored. This color will occur rather someone is in the water or not. This effect is caused by the ellectrolysis effect on the plates as well as the ionized field reacting with the minerals in the water itself.

**The following information is for research purposes only!
TrueRife does not make any claims as regards water color changes, variance and health.**

It is important to eat a variety of colorful foods in order to assure balanced chemistry. Every color is a chemical and has a chemical value. Chemical components of foods contribute to their acid-alkaline balance.

As a general rule, **green foods** nourish the immune system, especially the liver and gall bladder.

Red foods nourish the endocrine system, including the pituitary gland, as well as the heart and small intestines.

Orange foods nourish the joints.

Yellow foods nourish the digestive system, including the spleen, stomach, and pancreas. White foods nourish the respiratory system, namely the lungs, but also the large intestines, lymphatic system and skin.

Black foods nourish the circulatory system, kidneys and bladder.

By the same token, when the water is changing colors, each color represents the part of the body that is being detoxified.

Color of Particle Material or Area of the Body

Yellow green: Purifying the kidney, bladder, urinary tract, female/prostate area

Orange: Purifying joints

Brown: Purifying the liver

Black: Purifying the liver; tobacco, cellular debris

Dark green: Purifying the gallbladder

White foam: Lymphatic system

White cheese-like particles: Most likely, yeast

Black flecks: Heavy metals

Red flecks: Blood clot material

Water color change is normal and a result of the plating and components of the water itself. No claims are made by TrueRife that any meaning at all should be attached to water color if it should vary. The Ion Pro Wave is primarily a frequency delivery device!

Color or Particle	Material or Area of the Body Being Detoxified
Black	Liver
Black Flecks	Heavy Metals
Brown	Liver, Tobacco, Cellular Debris
Dark Green	Gall Bladder
Orange	Joints
Red Flecks	Blood Clot Material
White Cheese-Like Particles	Most Likely Yeast
White Foam	Mucous from Lymph System
Yellow-Green	Kidneys, Bladder, Urinary Tract, Female/Prostate Area

Ion Pro Wave and RR Enzyme

Since the introduction of the Ion Pro Wave Hydrotherapy system, we have received positive reports as well as blood work for a variety of cancers. What has been puzzling is that many of these reports came from individuals who were running simple detox frequencies only. Since these frequencies have no known association with Rife Cancer frequency research, what is the mechanism for these positive reports?

A clue as to what may be happening may have to do with the enzyme RR (ribonucleotide reductase) which some researchers believe to be at the core of cancerous growth. Enzymes control what takes place in a cell. The pivotal enzyme for the synthesis of DNA, and thus for cell growth, is RR (ribonucleotide reductase) since it supplies building blocks of DNA.

A novel way of blocking this enzyme is suggested by the fact that at the “core” (active-site) of this enzyme is a lone electron (free-radical) which is essential for its activity.

Such free radicals can be neutralized or disabled by passing mild direct electric current through the tissue. Since the concentration of the target enzyme RR is much higher in cancerous cells, as compared to healthy resting cells, the gentle DC electrotherapy would act selectively on malignant growth.

Evidence is continuously building that the vortex of the disease cancer is around the enzyme ribonucleotide reductase. The following facts about cancer seem to lend credence to RR as a necessary component for cancerous growth.

□ There are no cancers of the heart muscle, nor of the nerve cells of the brain; cells of these tissues do not need and thus may not possess basal level concentrations of the enzyme ribonucleotide reductase.

□ There is strong circumstantial evidence that cancer is initiated at the site of this enzyme. If that is the case, disabling this enzyme is tantamount to nipping in the bud the whole process of cancerous growth! Low level DC electrotherapy has been proven in some studies to interrupt and reverse cancerous growth.

In the 1985 study, gentle electrotherapy was shown to consistently and progressively reduce the tumor mass. Five one-hour treatments over 5 days at 2.4 milliampere resulted in 98% reduction!

Researchers (they refer to this as GEIPE or Gentle Electrotherapy to Inhibit Pivotal Enzyme) who are pursuing these protocols state “this cancer treatment should be effective in treating various solid cancers such as bladder, bone, brain, breast, cervical, colon, esophagus, kidney, liver, lung, ovarian, pancreatic, prostate, rectal, skin, stomach, testicular, throat & uterine cancers.”

Rather this is the mechanism of the Ion Pro Wave hydrotherapy systems positive reports is not known, but it may provide interesting insight and clues on what may be happening during the sessions.
